

The Puritii™ Air Purification System is a portable, high-capacity air filtration system for quick and effective air purification in your home or office.

Puritii™ Quick Facts

Puritii removes all three pollutant categories with up to 99.99% efficiency, including:

- » Particulates down to .3 microns, including pollen, dust and dust mite residue, pet dander, etc.
- » Volatile organic compounds (VOCs) from smoke, odors, exhausts, fumes, chemicals, etc.
- » Airborne bacteria, mold, fungi, and viruses

The system uses a high-capacity DC motor that:

- » Cleans the air of a 920 square ft room in half an hour
- » Decreases energy usage up to 50% compared to AC-powered purifiers (qualifies for Energy Star designation)

Filtration occurs in an 11-stage process which:

- » Captures particulates as small as .3 microns
- » Absorbs dangerous gases, chemicals and odors
- » Ionizes air to make it fresh and clean
